Mobile to Mobile	SMS	2.00

Rate Review

Digicel will conduct a review of the rates for the Interconnect services every 3 years. The parameters that Digicel will take into account include, but are not limited to:

- equipment asset life,
- cost of equipment,
- spectrum and other regulatory fees,
- changes in direct operational costs related to interconnection,
- variation in network operational costs such as site lease costs, labour costs, cost of power etc.
- attribution of direct and indirect fixed and common costs,
- costs of network investments associated with coverage expansion or improvements in quality,
- required return on investment.

These parameters will be weighted in proportion to their overall contribution to the rate and where the review indicates that the rate is higher or lower than the current rate Digicel will amend the Tariff Schedule accordingly.

Service Credits for delays in implementation

For every full month or part thereof delay past the agreed date implementation date which is solely attributable to delays on DIGICEL's side, a service credit equal to one month's recurring charges will be applied to the account of the TELCO.
